

Sample Project Documentation Guide

Date:	15 March 2026	Team ID:	PNT2022TMID124356
Project Name:	ANTI DEBT	Lead:	Lakshmi Sravya Kagitha (Team Lead)

Documentation Structure Overview

This project is built as a modular application comprising a decoupled FastAPI backend server and a Vite React SPA frontend client. Please refer to the Deliverables.md in this directory and the root README.md for the complete setup manuals, ORM database schema parameters, and endpoint lists.

Backend Architecture Highlights

- **app/main.py:** Mounts CORSMiddleware and registers FastAPI routers.
- **app/database/database.py:** Connects SQLAlchemy sqlite session mappings.
- **app/auth/auth.py:** Validates JWT session claims and hashes user passwords securely via pbkdf2_hmac.
- **app/routers:** Segregates endpoints into modular controllers (auth, loans, analysis, recommendations, negotiation, chat, reports).

Frontend Architecture Highlights

- **src/App.jsx:** Manages React Router route definitions and layout guarding.
- **src/components/Sidebar.jsx:** Collapsible navbar drawer with dark/light themes selector.
- **src/pages:** Segregated page views linking back to Axios API calls.
